

Mepco HRM – The payroll and HR management system ensures user satisfaction

Mepco HRM, based on latest Microsoft technologies, is a suite of full-featured applications for payroll administration, human resource management, recruitment and staff development. The system, already used by hundreds of companies, has received excellent feedback from its rapidly expanding user base.

Mepco HRM consists of Mepco Palkat (Payroll), Mepco Henkilöstö (Human Resources) and Mepco Rekrytointi (Recruitment), three standalone modules that can be deployed individually or all three together. They produce maximum added value when used as an integrated whole.

The cutting-edge payroll administration and human resource management system can be used in all business sectors and in companies of all sizes – including demanding multi-company environments of service centres and accounting companies.

Top grade usability and efficiency

Our human resource management solution has been developed within the framework of Microsoft's international development programme together with other Finnish companies. The user interface, developed in collaboration with the Usability Laboratory of the University of Tampere, resembles Microsoft Outlook and has been praised as the most user-friendly interface on the market.

The strengths of our HRM solution include its extensive palette of features, adaptability to company-specific needs and excellent interfacing capabilities with other information systems. The solution enables users to automate processes and makes daily administration and management work simpler and more effective. Distributed services and high self-service degree in tasks such as data collecting and reporting boost productivity by saving resources for more demanding tasks.

Strong support for your company's development

The system adapts flexibly to the individual needs of your company. Efficient deployment is guaranteed by our long experience with customer-specific conversion tasks, the

system's powerful predefined reports and salary classes, its flexibility and the latest Smart Client technologies.

We also take care of system development after the deployment stage when your organisation undergoes changes. Harnessing of the full potential of the system can be ensured with a service agreement, which can, in addition to daily support and service tasks, be tailored to include development work. We also support our users by arranging training opportunities on a regular basis.

Buy, rent or outsource

The system is available as a traditional delivery and in the form of a rented service. In the latter, all software costs and usage fees can be made a part of the fixed monthly price. Leading producers of outsourcing services also employ our system for payroll services.

Local service from experienced experts

Our customers can rely on the support of Finland's most experienced experts who have developed numerous payroll systems. Our certified Microsoft Gold Partnership and the latest technologies we use in our work guarantee ongoing development and secure your investment.
